

Bootstrap — Topic 18: Buttons

Study paper format: notes (Roman Urdu + English technical terms) + active recall Q&A at the end.

1. Button Basics

Bootstrap mein button banane ke liye `.btn` class base hai — akele `.btn` sirf basic shape/padding deti hai, color ke liye ek **variant class** sath honi zaroori hai.

```
html

<button class="btn btn-primary">Click Me</button>
```

2. Button Variants

Bootstrap ke pre-defined theme colors har button variant mein available hain:

```
btn-primary
btn-secondary
btn-success
btn-danger
btn-warning
btn-info
btn-light
btn-dark
```

Class	Color	Typical Use
btn-primary	Blue	Main action (Submit, Save)
btn-secondary	Gray	Secondary action
btn-success	Green	Confirm, positive action
btn-danger	Red	Delete, destructive action
btn-warning	Yellow	Caution
btn-info	Cyan	Informational action
btn-light	Light gray	Subtle action
btn-dark	Black/dark	Dark theme action

html

```
<button class="btn btn-primary">Primary</button>
<button class="btn btn-danger">Delete</button>
<button class="btn btn-success">Save</button>
```

Outline Variants

Har color ka ek **outline version** bhi hota hai — jahan solid background ki bajaye sirf border/text colored hota hai.

```
btn-outline-primary
btn-outline-danger
btn-outline-success
```

(aur baqi colors ke liye bhi `btn-outline-*` pattern.)

html

```
<button class="btn btn-outline-primary">Outline Primary</button>
```

Use case: Secondary actions jahan solid button zyada visually heavy lage — outline zyada subtle hota hai.

3. Button Sizes

btn-lg → bara button
btn-sm → chota button

(Koi size class na ho to default/medium size milti hai.)

html

```
<button class="btn btn-primary btn-lg">Large Button</button>  
<button class="btn btn-primary">Default Button</button>  
<button class="btn btn-primary btn-sm">Small Button</button>
```

4. Button Groups

`.btn-group` multiple buttons ko **ek connected unit** ki tarah group karta hai — buttons aapas mein directly attached (bina gap ke) dikhte hain.

html

```
<div class="btn-group" role="group">  
  <button class="btn btn-primary">Left</button>  
  <button class="btn btn-primary">Middle</button>  
  <button class="btn btn-primary">Right</button>  
</div>
```

Note: `role="group"` accessibility ke liye add kiya jata hai.

Vertical Button Group

html

```
<div class="btn-group-vertical">
  <button class="btn btn-primary">Top</button>
  <button class="btn btn-primary">Middle</button>
  <button class="btn btn-primary">Bottom</button>
</div>
```

Buttons vertically stack ho jate hain (ek ke neeche ek), horizontally attached ki bajaye.

Button Group Sizes

Pure group par size class lagai ja sakti hai, har button par alag se nahi:

html

```
<div class="btn-group btn-group-lg">
  <button class="btn btn-primary">One</button>
  <button class="btn btn-primary">Two</button>
</div>
```

Cheat Sheet

Category	Classes
Base	<code>btn</code>
Variants	<code>btn-primary</code> , <code>btn-secondary</code> , <code>btn-success</code> , <code>btn-danger</code> , <code>btn-warning</code> , <code>btn-info</code> , <code>btn-light</code> , <code>btn-dark</code>
Outline variants	<code>btn-outline-primary</code> , <code>btn-outline-danger</code> , etc.
Sizes	<code>btn-lg</code> , <code>btn-sm</code>
Groups	<code>btn-group</code> , <code>btn-group-vertical</code> , <code>role="group"</code>
Group sizes	<code>btn-group-lg</code> , <code>btn-group-sm</code>

Practice Exercises

1. Teen buttons banao — ek `btn-primary`, ek `btn-outline-danger`, aur ek `btn-success btn-lg`.
2. Ek `btn-group` banao jisme teen options hon ("Day", "Week", "Month") jaise ek filter toolbar.
3. `btn-group-vertical` use kar ke ek sidebar-jaisa vertical button menu banao.
4. Same button ko `btn-sm`, default, aur `btn-lg` ke sath side by side dikhao aur size difference observe karo.

Active Recall — Bootstrap Buttons

Khud se answer karne ki koshish karo, phir neeche scroll karke check karo.

- Q1. `.btn` class akele kya karti hai, aur usay properly styled button banane ke liye aur kya chahiye?
- Q2. `btn-danger` aur `btn-success` typically kis type ke actions ke liye use hote hain?
- Q3. Outline button variants (`btn-outline-*`) normal solid variants se kaise different hote hain, aur kab use hote hain?
- Q4. Button size classes konsi hain, aur default size kya hoti hai agar koi size class na lagayi jaye?
- Q5. `btn-group` kya karta hai, aur usme `role="group"` kyun add kiya jata hai?
- Q6. `btn-group` aur `btn-group-vertical` mein kya farq hai?
- Q7. Agar ek `btn-group` ke andar sab buttons ko `lg` size dena ho, to har button par `btn-lg` lagane ki bajaye kya better approach hai?
-

Answers

<details> <summary>Answers dekhne ke liye click karein</summary>

A1. `.btn` akele sirf basic button shape, padding, aur cursor styling deti hai — koi color nahi. Properly styled (colored) button ke liye ek variant class (jaise `btn-primary`, `btn-danger`) sath lagani zaroori hai.

A2. `btn-danger` (red) destructive actions ke liye use hota hai — jaise Delete. `btn-success` (green) positive/confirm actions ke liye use hota hai — jaise Save ya Submit.

A3. Outline variants mein background transparent hota hai aur sirf border + text colored hota hai (solid background nahi hota jaisa normal variants mein). Ye tab use hote hain jab button ko visually kam heavy/subtle dikhana ho — jaise secondary actions ke liye.

A4. Size classes: `btn-lg` (large) aur `btn-sm` (small). Agar koi size class na lagayi jaye to default/medium size milti hai.

A5. `btn-group` multiple buttons ko ek connected unit ki tarah group karta hai (buttons aapas mein directly attached dikhte hain, gap ke bina). `role="group"` accessibility ke

liye add kiya jata hai — taake screen readers group ko properly identify kar saken.

A6. `btn-group` buttons ko horizontally group karta hai (side by side). `btn-group-vertical` buttons ko vertically stack karta hai (ek ke neeche ek).

A7. Har button par individually `btn-lg` lagane ki bajaye, poore group container par size class lagani chahiye: `<div class="btn-group btn-group-lg">` — isse sab buttons automatically consistent size le lete hain.
